Migration Manager for Enterprise Social

Simplify and accelerate social network migrations

The rapid adoption of enterprise social networks such as Microsoft Yammer, Jive and more is driven by organizations and users seeking to improve communication, collaboration, productivity and overall employee engagement. These platforms are being adopted without a thought for governance or how they'll be managed, which quickly creates a drain on resources and budgets. And to consolidate and standardize environments can be very risky, complex and expensive.

With Migration Manager for Enterprise Social, you're able to ensure your Jive migration to Yammer, or Yammer-to-Yammer consolidation, is completed on time, on budget and with ZeroIMPACT on end users. Simplify and accelerate your project by discovering the content you want to move, and mitigate the risk associated with the project by migrating with high fidelity and minimal downtime. You'll also be able to retain permissions, metadata and rich text so users can hit the ground running.
